**Exposure estimation and reference to its source - Workers:**

**Exposure assessment:** Qualitative approach used to conclude safe use.

**Section 4 – SU03 - Guidance to work within boundaries set by Exposure Scenarios**

**General:** The immediate downstream user is required to evaluate whether the operational conditions and risk management measures described in the exposure scenario fit their use. The user has to ensure that risks are managed. The risk assessment methods/tools given in section 3 may be used for this evaluation.

**Environment:** Guidance is based on assumed operating conditions which may not be applicable to all sites; thus, scaling may be necessary to define appropriate site-specific risk management measures. If scaling reveals a condition of unsafe use (i.e., RCRs > 1), additional RMMs or a site-specific chemical safety assessment is required.
